Sampat Hake

Senior Software Engineer | Backend & AI Engineer

Bangalore, India | +91-7378737921 | hake.sampat.121@gmail.com | https://www.linkedin.com/in/sampatraohake121 | https://github.com/SamieZian | https://sampathake.in

SUMMARY

Senior Software Engineer with 5 years of experience building scalable, distributed backend systems in Python, Go, and FastAPI on AWS and GCP. Founding engineer for a production AI-agent platform (Model Context Protocol) serving 1,000+ organizations and 2,000+ daily executions, with deep work in microservices, event-driven pipelines, REST APIs, system design, and reliability.

EXPERIENCE

Kotak Mahindra Bank — Bangalore, India
Software Development Engineer - 2 (Backend) — Sep 2026 – Present

- Building and enhancing the **Gold Loan Origination System (GLOS)** and **Vehicle Loan Origination System (VLOS)**: secure, high-availability digital lending platforms that automate the retail loan lifecycle from application, KYC, and collateral valuation through underwriting, sanction, and disbursement.

Clientell AI — Bangalore, India
Senior Software Engineer (Founding Engineer) — Oct 2025 – Aug 2026

- Architected a multi-tenant **Model Context Protocol (MCP)** connector platform integrating 9 enterprise providers (Gmail, Outlook, Google/Outlook Calendar, Drive, SharePoint, Teams, Dropbox, Jira) with parallel multi-source query merging, powering AI agents across **1,000+ organizations** and **2,000+ daily executions**.
- Replaced string-keyword routing with a hierarchical **LLM classifier** and a lightweight MCP agent that bypasses a 225KB unified prompt, eliminating tool-call loops and cutting connector-query context overhead by **~95%**.
- Migrated the AI workflow execution layer from synchronous to **async distributed architecture** (Redis queues, tuned per-worker connection pools across 11 Uvicorn workers), improving throughput by **45%** and reducing p95 latency from **900ms to 250ms**.
- Built a two-phase autonomous **code-generation agent** on GitHub MCP (repo discovery, then generate-and-push) for Salesforce Apex/LWC code, cutting manual implementation effort by **20%**; stabilized long-running SSE streams with Nginx tuning.
- Launched a Salesforce-native **Slack AI assistant** (reports, SOQL queries, workflow triggers, thread-persistent conversations) that grew automation adoption by **23%**; shipped a GPT-5.1 prompt-enhancement service with prompt-exfiltration guardrails.
- Owned production reliability and compliance: **Langfuse tracing**, health checks, real-time Slack incident alerts (**30%** faster response); hardened 4 services to pass **Salesforce CASA security certification**; resolved 30+ production tickets in 3 weeks.

WizCommerce — Bangalore, India
Software Development Engineer - 1 (Backend) — Jan 2024 – Sep 2025

- Led 3+ major **ERP integrations** (QuickBooks, NetSuite, SOS Inventory) synchronizing product, inventory, order, and invoice flows with **100% data accuracy**; built a secure FTP pipeline handling **5K+ files/month** at **99.9% uptime**.
- Engineered **event-driven data pipelines** using GCP Pub/Sub, Cloud Tasks, and Change Data Capture (CDC) for asynchronous synchronization, achieving 98% sync accuracy and reducing data lag by **40%**.
- Optimized a microservices-based image-transformation and external-API service for large product catalogs, cutting response times from **10s to 2s (80%)**, and built an external-API microservice for customer integrations.
- Designed a Product Information Management (PIM) platform (catalog, pricing, variants) and a **role-based access control (RBAC)** system, eliminating Excel-based catalog operations and ensuring 100% access-control compliance.

Cogno AI (acquired by Exotel) — Mumbai, India (Remote)
Software Development Engineer - 1 (Backend) — Oct 2022 – Jan 2024

- Scaled campaign-processing backends to **1M+ users** by moving workloads onto serverless **AWS Lambda + SQS** pipelines, cutting campaign runtime from **5 hours to 30 minutes (90%)**.
- Created a microservice automating AWS provisioning (SQS, S3, Lambda), cutting per-client setup effort by **90%** (2 hours saved).
- Converted Django cron jobs to **Apache Airflow DAGs**, boosting scheduling reliability by 30%; shipped Cogno Drive, a media storage service handling **1K+ daily uploads** with 50% faster media access.

Guavus (Thales Group) — Gurugram, India
Software Development Engineer - Intern (Full-Stack) — Oct 2021 – Jun 2022

- Re-architected core product components (SQLstream, NWDAF) and tuned backend data-processing pipelines, improving execution performance by **40%** and cutting deployment time by **30%**.
- Developed REST APIs and end-to-end test infrastructure achieving **98% coverage** on critical platform components.

SKILLS

Languages: Python, Go (Golang), JavaScript, TypeScript, SQL, Data Structures & Algorithms
AI/LLM: AI Agents, Model Context Protocol (MCP), LLM Routing & Orchestration, Retrieval-Augmented Generation (RAG), Prompt Engineering, OpenAI & Anthropic (Claude) APIs, LLM Observability & Evals (Langfuse), Guardrails, Inference Optimization
Backend: FastAPI, Django, Node.js, React.js, Angular, REST APIs, Microservices, OOP & Design Patterns, Event-Driven Architecture, Distributed Systems, SSE, WebSockets
Data & Cloud: PostgreSQL, Redis (Caching), Elasticsearch, Kafka, GCP (Pub/Sub, Cloud Tasks, Cloud Scheduler), AWS (Lambda, SQS, S3), Docker, Nginx, CI/CD (Jenkins, GitHub Actions), Apache Airflow, Monitoring (New Relic, GCP)

EDUCATION

B.Tech, Computer Science & Engineering, Dr. Babasaheb Ambedkar Technological University, Lonere (2018 – 2022). CGPA: 8.81/10

Certifications (Anthropic): Building with the Claude API, Introduction to Model Context Protocol, Claude Code in Action
